

IAQR Sulfur Deposition Improvements in 2010 and 2015

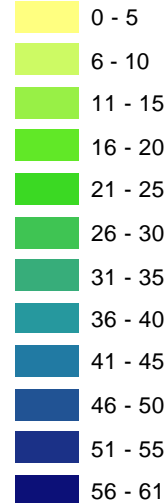

Projected changes in sulfur deposition,
compared to the base case in 2010

Legend

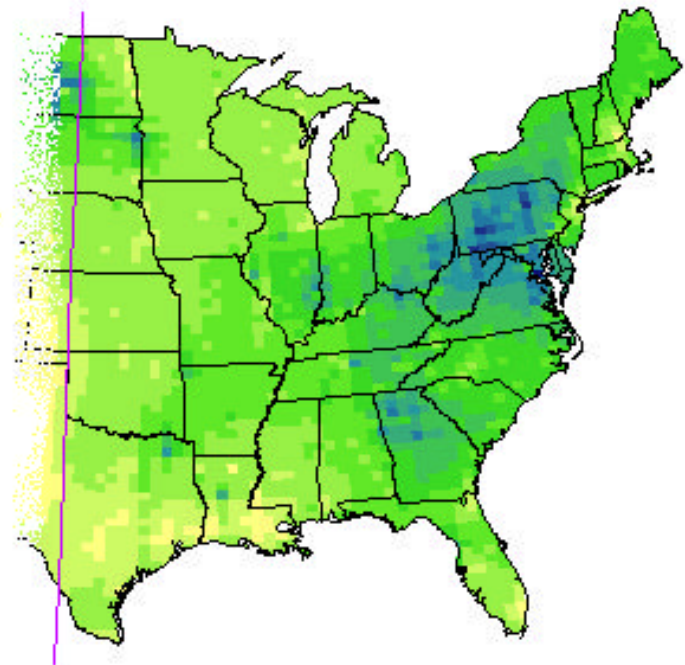

100th Parallel

Percent Reduction

* Base case assumes implementation of existing Clean Air Act programs and the proposed nonroad diesel rule.

Projected changes in sulfur deposition,
compared to the base case in 2015

By 2010, the proposed Interstate Air Quality Rule would reduce sulfur deposition beyond reductions expected without implementation of this rule. The majority of the East will see sulfur deposition reductions of up to 20 percent in 2010, while some

portions of Pennsylvania, Virginia, Maryland and West Virginia will see reductions of up to 45 percent. Estimates for 2015 show additional reductions, especially in the Southeast.
